FAVORLY APP BLUE PRINT

Core mechanic: instead of social interaction being the purpose of the app, helping someone is the reason people interact. Giving a natural bridge between friendship, dating, networking, community, and utility.

Microfavors. Real connections.

A location-based social app where people can ask nearby strangers for small, real-world favors—and potentially turn those interactions into friendships, dates, or meaningful connections.

The fundamental loop:

Need something → Ask nearby Favorly users → Someone helps → Helper earns HH → Users connect → Friendships/dates form

PITCH:

FAVORLY

Small Favors. Big Connections.

Imagine you're out somewhere and your phone is at **2%**.

You forgot your charger. You don't know anyone around you, and you really need your phone.

You open **Favorly**.

You post:

🪫 **"Does anyone nearby have an iPhone charger I can borrow?"**

Favorly immediately shows people nearby who are willing to help.

Someone 300 feet away responds:

"I have one. I'm by the bar."

You meet them, charge your phone, thank them, and go on with your day.

But something bigger just happened.

Two strangers connected.

The person who helped you earns **Helping Hands (HH)**—Favorly's reputation currency.

The more you help people, the more HH you earn. Your HH becomes a reflection of your reputation and reliability within the community.

And that's the entire idea behind Favorly:

What if helping someone was the easiest way to meet someone?

Today, social media connects us digitally.

Dating apps connect us based on attraction.

Friendship apps connect us based on interests.

Task platforms connect us through transactions.

Favorly connects people through real-life interaction.

HOW IT WORKS

1. ASK

Need something?

Post it on Favorly.

Micro favors are free.

- 🔋 Phone charger
- 📸 Someone to take a picture
- 🩹 Band-Aid
- ☂️ Umbrella
- 🗺️ Directions
- 💺 Someone to save a seat
- 🎟️ Concert connection
- 👋 Someone to hang out with

Your request is shown to nearby users.

2. HELP

Someone nearby sees your request and offers to help.

You meet safely in person.

Favor completed.

3. EARN

The helper earns **HH — Helping Hands.**

HH builds their reputation and can eventually be converted into **TT — Task Tokens.**

4. CONNECT

After helping each other, users can choose to stay connected.

Friends. Dates. Workout partners. Travel buddies. Concert companions.

A tiny favor can become a real relationship.

AND THEN THERE ARE TASKS

Favorly isn’t only for tiny favors.

Sometimes you need real help.

Your car has a flat tire.

You need help moving something.

You need someone to help assemble furniture.

You need help carrying something heavy.

These larger requests require **Task Tokens (TT).**

Users earn HH by helping others and can convert their HH into TT.

This creates a community where **contribution earns access to help.**

You help the community.

The community helps you.

FAVORLY IS ALSO SOCIAL

Users can openly ask for things that have nothing to do with traditional “favors.”

 Dating

“Anyone want to grab dinner tonight?”

 Friendship

“Looking for people to go out with this weekend.”

 Events

“Anyone going to this concert?”

 Wedding +1

“I need a fun +1 for a wedding next month.”

 Travel

“Anyone traveling to Italy this summer?”

 Fitness

“Anyone want to work out together?”

Favorly creates opportunities for people to meet **because they have a reason to meet.**

TRUST IS BUILT INTO THE APP

Every user has a reputation.

Sarah

🖐️ 247 HH
⭐ 4.9 rating
🤝 126 favors completed
✓ Verified

Instead of judging someone by their follower count, Favorly lets you see:

How helpful are they?

How reliable are they?

How have they treated other people?

THE BIGGER VISION

We live in a world where we're surrounded by people but increasingly disconnected from them.

We have hundreds—or thousands—of online connections, yet approaching a stranger in real life can feel awkward.

Favorly gives people a reason to.

You don't have to walk up to someone and say:

"Hey, want to be friends?"

You can simply say:

"Does anyone have a charger?"

And someone can say:

"I've got one."

That's the beginning.

Because the charger isn't really the product.

The connection is.

Favorly turns **small favors into real-world interactions, interactions into relationships, and helpfulness into social currency.**

FAVORLY

Small Favors. Big Connections.

The HH system — “Helping Hands”

Every verified user has a Helping Hands score (HH).

Example:

Kaitlin

- 🖐️ 127 HH
- 84 favors completed
- 4.9 ⭐ helper rating
- Verified ✓

HH represents a person’s history of being helpful.

Ways to earn HH (Helping Hands):

Action	HH
Give someone a hair tie	+1
Give someone a phone charger	+1
Help find a lost item	+1
Give directions	+1
Help carry something	+2
Help someone jump-start a car	+3
Help with a flat tire	+5

Action	HH
Larger/time-consuming favor	+5–10

Task Tokens — TT

HH = reputation

TT = spending power for favors

Users accumulate HH by helping.

They can convert some HH into Task Tokens (TT).

For example:

100 HH → 10 TT

Then:

“Can someone help me change my flat tire?”

might cost 5 TT to post.

This creates a community economy.

You aren’t simply paying strangers money.

You’re essentially saying:

“I’ve contributed to the Favorly community, and now I have earned the ability to ask the community for more.”

That should be the heart of the brand.

Two types of favors

🟢 MICRO FAVOR

Free.

Usually quick and nearby.

Examples:

- “Does anyone have a hair tie?”
- “Anyone have an iPhone charger?”
- “Can someone take a picture of me?”
- “Does anyone have sunscreen?”
- “Can someone save me a seat?”
- “Does anyone have a tampon?”
- “Can someone help me find my AirPod?”
- “Can someone tell me where the bathroom is?”
- “Anyone have an extra concert wristband?”

These should be free to request.

🔵 TASK

Requires TT.

More substantial requests.

Examples:

“Can someone help me change my flat tire?”

“Can someone help me move this couch?”

“Can someone help me assemble a desk?”

“Can someone drive me to the airport?”

“Can someone help me carry these boxes upstairs?”

The person requesting spends TT.

The person completing the task earns HH.

When creating a Micro Favor, users can select:

Radius

- 100 ft
- 250 ft
- 500 ft
- 1 mile
- 5 miles

For something like a hair tie:

🆘 I NEED A HAIR TIE

I'm at the gym and desperately need a hair tie 😭

📍 500 ft radius

2 people nearby can help

Someone sees:

Kaitlin needs a hair tie

350 ft away

🖐️ 127 HH

⭐ 4.9

HELP

They tap HELP.

Favorly opens a temporary chat:

"Where should we meet?"

Kaitlin:

"Squat rack!"

Favorly:

Meet-up confirmed ✓

Afterward:

Did Kaitlin receive the favor?

👍 Yes
👎 No

Helper gets:

+1 HH

This is where the social network happens

I wouldn't make Favorly primarily a feed of posts.

Instead, I'd make helping itself social.

After completing a favor:

You helped Sarah! 🖐

Sarah added you as a connection.

"You two should be friends?"

[Add Friend] [Not Now]

Now Sarah can see:

Sarah & Jake

Met on Favorly
🤝 Helped each other

That's a much more natural friendship origin story than:

"Hey, I saw you on a dating app."

Dating

I would not make Favorly look like Tinder.

Dating should be an additional layer.

Users can indicate:

What I'm here for

☑ Friends
☑ Dating
☑ Meeting people
☑ Helping others
☑ Networking
☑ Events
☑ Travel buddies

Then users can make requests like:

💝 Looking for a date

"Anyone want to grab sushi tonight?"

2 miles away

Looking for: Dating

Or:

 Wedding +1

“I have a wedding next Saturday and need a fun +1.”

That is much more organically social.

Public requests

I’d create a major feature called:

ASK

Users can publicly post almost anything appropriate to the Favorly community.

Categories:

 Help

“Need a phone charger.”

 Social

“Looking for people to go out tonight.”

 Dating

“Looking for a date.”

 Tickets

“Selling two Tomorrowland tickets.”

 +1

“Need a wedding +1.”

 Fitness

“Anyone want to work out together?”

✈️ Travel

“Anyone flying to Tokyo next week?”

🎉 Events

“Who’s going to this concert?”

🛠️ Tasks

“Need help changing my tire.”

This makes Favorly potentially much bigger than a favor app.

The Home Screen

I’d make the primary screen LIVE rather than a traditional social feed.

Something like:

FAVORLY

📍 Near You

🆘 LIVE REQUESTS

500 ft

🧻 Anyone have a hair tie?
Gym • 210 ft
1 person helping

🔋 Need an iPhone charger
Planet Fitness • 380 ft
3 people nearby

📸 Can someone take a picture of me?
Park • 420 ft

PEOPLE NEAR YOU

👩 Sarah — 84 HH
👨 Mike — 231 HH
👩‍🦰 Emma — 19 HH

[Meet People]

At the bottom:

HOME | ASK | DISCOVER | CHATS | PROFILE

The ASK button

This should be the giant central button.

Tap:

What do you need?

🆘 A favor

👫 Someone to hang with

💞 A date

🎟️ Buy/Sell tickets

💍 A +1

🛠️ A Task

✨ Something else

Then Favorly determines whether it’s:

MICRO → Free

or

TASK → TT required

Verification is extremely important

Because you're asking strangers to meet each other in real life, trust & safety needs to be one of the strongest parts of Favorly.

Profiles could have:

Verification badges

✓ Phone verified
✓ Email verified
✓ Government ID verified
✓ Selfie verified
✓ Social account verified

You could eventually have:

⭐ Trusted Favorly

for users who have:

- completed many favors
- maintained high ratings
- been on the platform for a certain period
- had no serious safety reports

Profile

A profile shouldn't primarily show followers.

It should show trust.

Example

Kaitlin

29
📍 New Jersey

👋 127 HH

⭐ 4.9

83 favors completed

I’m here for:

💞 Dating
👫 Friends
🆘 Helping people
💐 Events

About me

“Travel addict. Gym. Music. Always down to meet good people.”

Favor history

🩰 Hair tie — Helped
🔋 Charger — Helped
📸 Photo — Helped
🚗 Jump start — Helped

This creates an incredibly interesting social identity:

“Who are you?” → “How do you treat people?”

Friend system

Instead of followers, I’d use:

Connections

You can become connected after:

- completing a favor
- accepting a friend request
- meeting at an event
- mutually accepting

Potential relationship labels:

Friend

Date

Favorly connection

Met through Favorly

This prevents the app from becoming another follower-count competition.

Messaging

Messaging should have a safety-focused design.

When two strangers agree to meet:

TEMPORARY FAVOR CHAT

Kaitlin needs a hair tie.

Jake offered to help.

Meetup: Squat Rack

Estimated distance: 350 ft

[I'm Here]

[Cancel]

[Report]

After the favor is completed, the temporary chat can either:

Disappear

or:

Want to stay connected?

[Become Friends]

That is a very powerful mechanic.

Safety features I'd consider mandatory

Because strangers are physically meeting:

Location privacy

Never display someone's exact location publicly.

Instead:

~300 ft away

The exact meetup location is only revealed after both users agree.

Safety check

For higher-risk tasks:

Share meetup with trusted contact

Report user

Block user

Emergency button

Verified identity

Ratings

Favor completion confirmation

Suspicious behavior detection

No-show tracking

Fraud/scam detection

The reputation system

I'd actually make HH more sophisticated than a simple number.

Example:

 284 HH

Helping
284

Reliability
98%

Completed
143

Rating
4.96

Response rate
94%

Then someone can quickly determine:

"Is this stranger trustworthy?"

The Favorly economy

Eventually you could have:

HH → TT

But I'd make the conversion rate dynamic or capped.

Example:

Earn

👋 Help someone → +1 HH

Convert

100 HH → 10 TT

Spend

10 TT → Large Task request

This creates a closed-loop community economy.

Monetization

I would not charge for basic micro favors.

That's the magic of the product.

Instead, monetize around the ecosystem.

Favorly Plus

$4.99/month

Potential features:

- increased request visibility
- expanded geographic radius

- advanced filters
- profile boosts
- unlimited social requests
- travel mode
- advanced matching
- see who wants to connect

Promoted requests

Businesses/events could pay to promote legitimate posts.

Ticket marketplace

Potential transaction fee on ticket sales, subject to applicable laws and payment-provider rules.

Premium verification

Potentially enhanced verification—not a fake “pay to be trusted” system.

Local business partnerships

Example:

Gym:

Favorly members at this gym

Restaurant:

Favorly meetup tonight

Concert:

Favorly concert community

Favorly Moments

After a favor:

You just met someone because of Favorly.

Both users can optionally create a little memory:

“Sarah gave me a hair tie at the gym 😂”

📸 Add photo

❤️ Add to Favorly Moments

This could eventually create a beautiful social feed.

Not:

“Here’s what I ate today.”

But:

“These are the people I met.”

That is much more emotionally compelling.

The bigger vision

I wouldn’t position Favorly as:

“An app for asking strangers for favors.”

That’s too small.

I’d position it as:

“The social network built around helping each other.”

Or:

“Meet people by helping people.”

Or my favorite:

Favorly

Small favors. Big connections.

The hair tie isn't really the product.

The connection is the product.

The hair tie simply creates the reason two strangers interact.

And that gives you a potentially very interesting intersection of:

Nextdoor + Bumble BFF + Tinder + TaskRabbit + Meetup

—but with helpfulness/reputation as the central mechanic, rather than simply posting, swiping, or hiring.

If you're serious about building this, the next step should be turning this into an actual developer-ready blueprint: every screen, button, user flow, database object, HH/TT rules, matching algorithm, verification system, admin panel, and MVP feature set.k
